

POWER PEOPLE

Talent Acquisition for a Greener Future

Hydrogen

Currently, hydrogen is mainly used in the refining and chemical sectors and produced from fossils. But the industry is changing fast, and clean hydrogen will be a critical element to the energy transition.

Produced from renewables, it can help decarbonise a range of sectors, including long-haul transport, chemicals, iron, and steel, where it is proven difficult to reduce emissions.

Power People understands the challenges facing the sector. Our dedicated team of consultants can support clients throughout the whole project lifecycle.

We have proven experience in supporting developers, and contractors for numerous hydrogen jobs and projects throughout the world.

These include:

Engineering, planning, design, procurement, development, operations and maintenance, project controls, and project management.
